University of Ljubljana

Adiabatic Quantum Computing: What Is It and What It Looks Like Today

Abstract

Adiabatic quantum computing (AQC) has come a long way since its inception in 1998. This seminar will present the basics of AQC, the progress it has made so far and the current state of the art. One of the most recent breakthroughs is D-Wave's release of readily available AQC hardware through their Leap platform. A live demonstration will show how anyone can use a quantum computer today.
